Experiment 11: Affine Transformation

AIM

To perform Affine Transformation on an image using OpenCV.

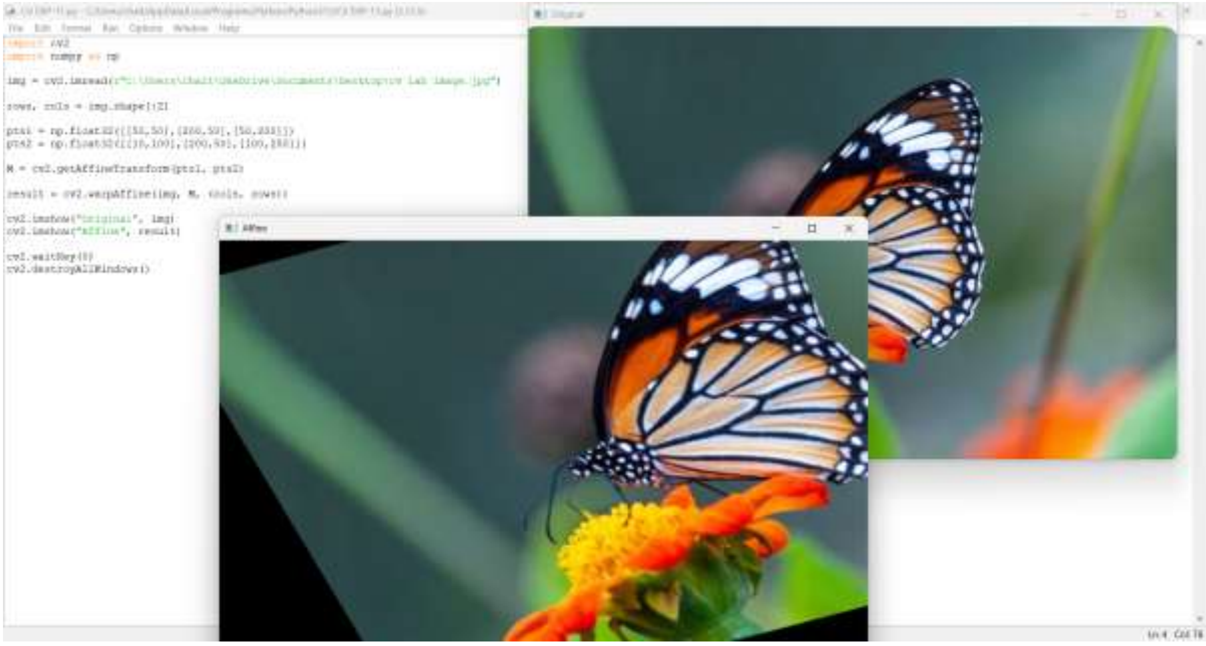
PROCEDURE

1. Import OpenCV and NumPy.
2. Read the input image.
3. Define source and destination points.
4. Apply cv2.getAffineTransform().
5. Display the transformed image.

PROGRAM:

```
import cv2
import numpy as np
img = cv2.imread(r"C:\Users\chait\OneDrive\Documents\Desktop\cv lab image.jpg")
rows, cols = img.shape[:2]
pts1 = np.float32([[50,50],[200,50],[50,200]])
pts2 = np.float32([[10,100],[200,50],[100,250]])
M = cv2.getAffineTransform(pts1, pts2)
result = cv2.warpAffine(img, M, (cols, rows))
cv2.imshow("Original", img)
cv2.imshow("Affine", result)
cv2.waitKey(0)
cv2.destroyAllWindows()
```

OUTPUT:



RESULT:

The image is displayed after applying Affine Transformation.
