

37. Play Video in Reverse Mode

AIM

To read a video using OpenCV and display it in reverse mode.

CODE

```
import cv2

video = cv2.VideoCapture(r"C:\Users\chait\Downloads\video.mp4")

frames = []

while True:
    ret, frame = video.read()

    if not ret:
        break

    frames.append(frame)

video.release()

# Display frames in reverse
for frame in reversed(frames):
    cv2.imshow("Reverse Video", frame)

    if cv2.waitKey(30) & 0xFF == 27:
        break

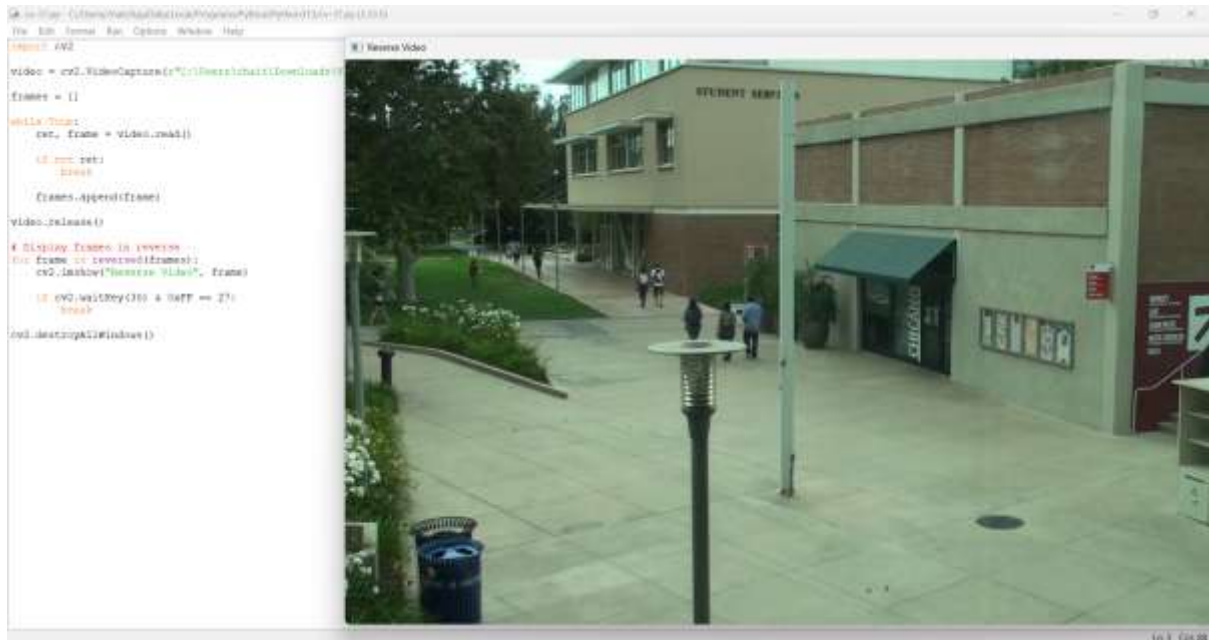

cv2.destroyAllWindows()
```

INPUT

A video file.

OUTPUT

The video is played **backwards**, from the last frame to the first frame.

RESULT

Thus, the given video was successfully displayed in reverse mode using OpenCV.
