

Experiment 10: Image Translation (Moving an Image)

Aim

To move an image from one position to another using image translation.

Procedure

1. Import OpenCV and NumPy.
2. Read the input image.
3. Create a translation matrix.
4. Apply translation using `cv2.warpAffine()`.
5. Display the translated image.

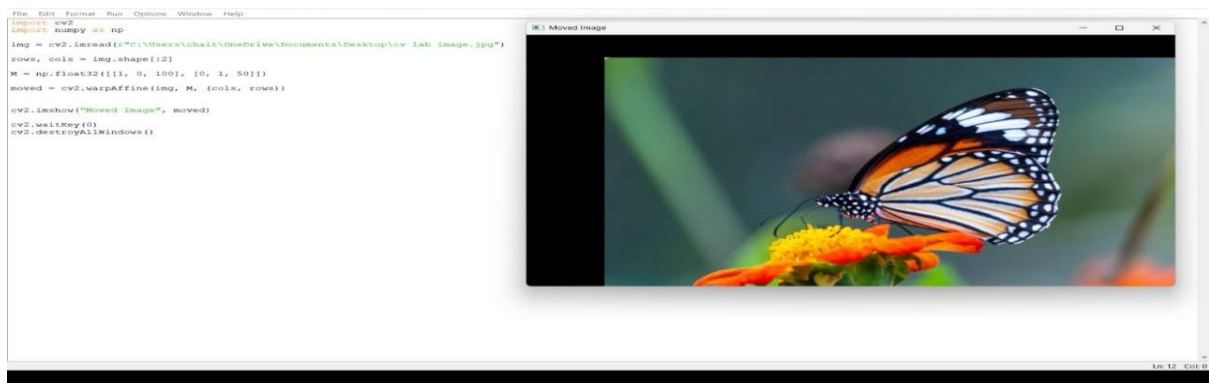

Code:

```
import cv2
import numpy as np

img = cv2.imread("image.jpg")
rows, cols = img.shape[:2]
matrix = np.float32([[1, 0, 100],
                    [0, 1, 50]])

translated = cv2.warpAffine(img, matrix, (cols, rows))
cv2.imshow("Translated Image", translated)
cv2.waitKey(0)
cv2.destroyAllWindows()
```

Output:

Result: The image was successfully moved from one position to another using image translation
