

Experiment 3: Edge Detection using Canny

Aim

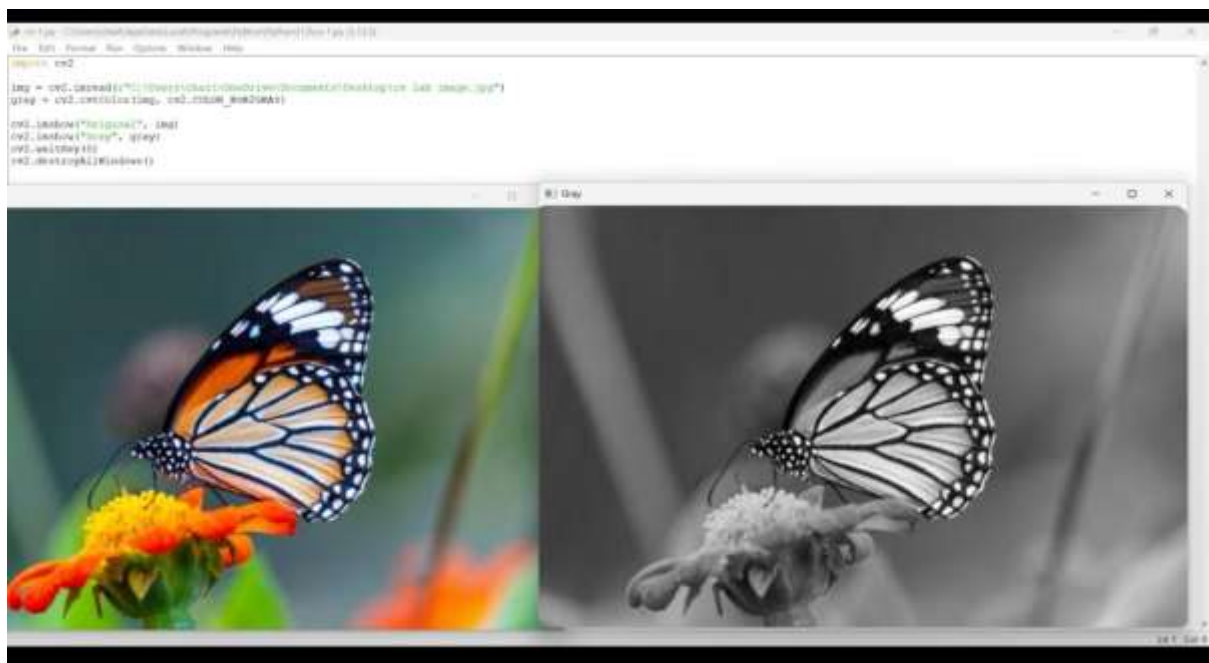

To detect image edges using the Canny algorithm.

Procedure

1. Import OpenCV.
2. Read the image.
3. Convert it into grayscale.
4. Apply Canny edge detection.
5. Display the result.

Code:

```
import cv2  
  
img = cv2.imread("image.jpg")  
gray = cv2.cvtColor(img, cv2.COLOR_BGR2GRAY)  
edges = cv2.Canny(gray, 100, 200)  
cv2.imshow("Edges", edges)  
cv2.waitKey(0)  
cv2.destroyAllWindows()
```

Result: The edges of the image were successfully detected.
