

27. Cropping, Copying and Pasting Image inside Another Image

AIM

To crop a portion of an image and copy and paste it into another image using OpenCV.

PROCEDURE

1. Read the source and destination images.
2. Select a rectangular region from the source image.
3. Crop the selected region.
4. Resize it if necessary.
5. Paste it into the destination image.
6. Display the result.

PROGRAM

```
import cv2

# Read images
img1 = cv2.imread(r"C:\Users\chait\OneDrive\Documents\Desktop\cv lab image.jpg")
img2 = cv2.imread(r"C:\Users\chait\OneDrive\Documents\Desktop\cv lab image.jpg")

# Crop a portion of image
crop = img1[50:200, 50:200]

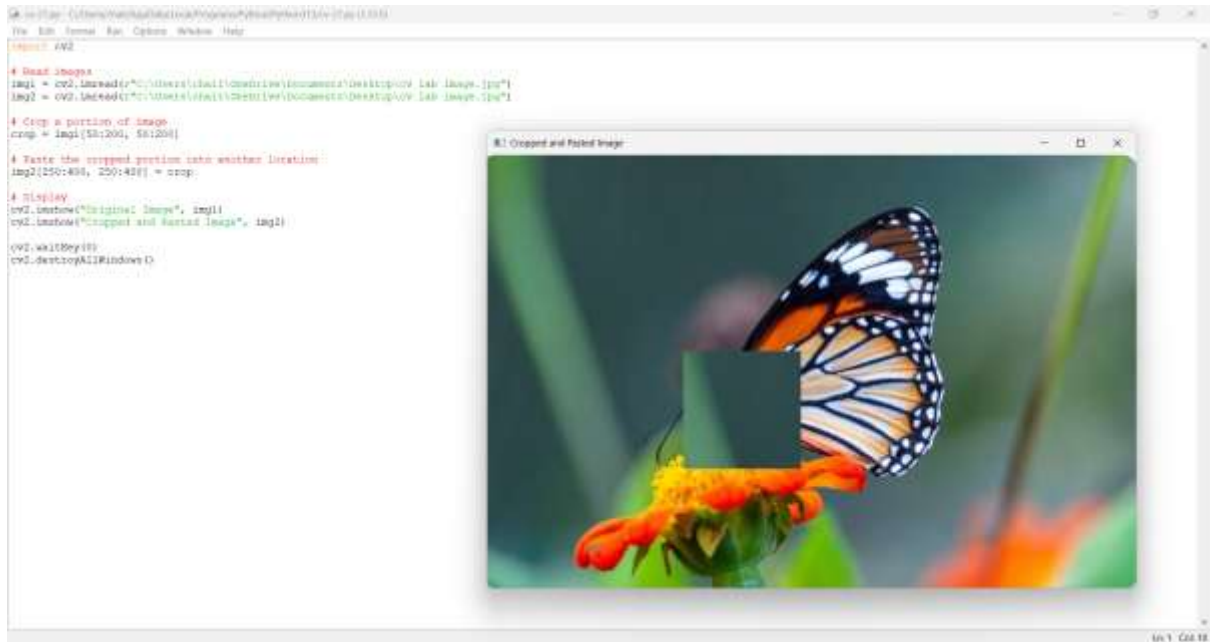

# Paste the cropped portion into another location
img2[250:400, 250:400] = crop

# Display
cv2.imshow("Original Image", img1)
cv2.imshow("Cropped and Pasted Image", img2)

cv2.waitKey(0)
cv2.destroyAllWindows()
```

OUTPUT

A portion of the image is cropped and pasted into another location.

Explanation

We selected a rectangular region using NumPy slicing and copied it to another location. This demonstrates basic cropping, copying, and pasting operations in OpenCV.
